SAFETY DATA SHEETS : ALPHA6CORPORATION.COM/SDS

Professional paint and custom tools for artists and craftsmen in the Pinstriping, Sign Painting, and Graphic Arts fields.

It is our mission to honor artists in the graphic arts medias by creating tools and paints that will help them to succeed. By utilizing our fantastic team of artists, and listening to the feedback from our customers, we continually ensure the high quality of our current products, as well as develop new ones, to stay up to date with the changing needs of our customers and retailers.

DIRECTIONS: Use on canvas, paper, fabric, wood, plaster, masonry, paper-mache, or most non-slick, non-oily surfaces. Thin with water or with AlphaKrylik mediums. Mixes with most other acrylic or water-based paints or tints designed for use in water-based paints. Overthinning with water may result in poor adhesion. Do not allow to dry on brushes or tools. Clean up with soap and water. Dries permanent and water resistant. For best results, use and store between 65-85 Degrees Fahrenheit.

FREQUENTLY ASKED QUESTIONS

Alphakrylik is scientifically formulated, mixed, and bottled in Detroit, MI. Alphakrylik is formulated with ground pigments rather than dyes in order to be more opaque to ensure single stroke coverage allowing for faster drying times, a higher opacity out of the bottle, better weather resistance outdoors.

We strive for constant improvement to ensure that Alphanamel not only ranks as the best lettering enamel on the market, but that it stays that way. Since we are an artist owned company, we are able to cut any red tape in the way of ensuring that every batch produced is properly tested and any necessary adjustments are made prior to release to ensure the quality of our paint at the absolute highest it can be.

WHAT KIND OF PAINT IS ALPHAKRYLIK?

Alphakrylik is a highly pigmented water based professional quality medium weight sign acrylic. We use professional quality ground pigments and carriers in our paints to ensure that our paints are incredibly durable, controllable, highly pigmented, and provide the best possible coverage in the market.

CAN I REDUCE IT WITH WATER?

While it is of course possible to do so with any water based paint, including Alphakrylik, we recommend using our specially formulated alphakrylik reducer to ensure that the integrity of the paint is not compromised during reduction.

HOW DO I THIN IT OUT?

We recommend using our Alphakrylik Airbrush Reducer in order to reduce your acrylic paint for perfect flow for use with your favorite painting tools or to lower opacity without compromising the integrity of the paints and pigments. This reducer is specifically designed to work with our paint.

WHAT ABOUT LONGEVITY?

Alphakrylik has been environment-tested to have a 4-6 year longevity when used properly (proper prepping procedures and correct reducers) in outdoor applications, and permanent in indoor applications.

WHAT CAN I PAINT ON WITH IT?

Glass, Metal, Brick, Canvas, Acetate, Wood, Paper, Leather, Tile, and so much more! Our specially formulated paints have excellent adhesion to almost any surface on both indoor and outdoor applications.

TIPS FOR USE

Shake bottles thoroughly before use. Each bottle has rattlers included to help mix the paint, similar to using spray paint cans.

Alphakryliks are compatible with other acrylic mediums, as well as our own Alphakrylik Reducer. You can use mediums to change the weight and texture of the paint.

Acrylic paints dry very quickly. If working on a larger project where you need the paint to stay workable for longer, add a slow medium to your paint to help slow the drying time.
