SAFETY DATA SHEETS : ALPHA6CORPORATION.COM/SDS

Professional paint and custom tools for artists and craftsmen in the Pinstriping, Sign Painting, and Graphic Arts fields.

It is our mission to honor artists in the graphic arts medias by creating tools and paints that will help them to succeed. By utilizing our fantastic team of artists, and listening to the feedback from our customers, we continually ensure the high quality of our current products, as well as develop new ones, to keep up with the changing needs of our customers and retailers.

DIRECTIONS: For brush and roller application only. Reduce with AlphaSol Reducers as needed, clean tools with mineral spirits or high quality reducers. For use on metal, wood, leather, glass, vinyl, brick or stone. Professional Use only.

FREQUENTLY ASKED QUESTIONS

Alphanamel is scientifically formulated, mixed, and bottled in Detroit, MI. Alphanamel is formulated with ground pigments rather than dyes in order to be more opaque to ensure one stroke coverage, more durable, a higher gloss finish, decreased dry times, and to eliminate brush strokes.

We strive for constant improvement to ensure that Alphanamel not only ranks as the best lettering enamel on the market, but that it stays that way. Since we are an artist owned company, we are able to cut any red tape in the way of ensuring that every batch produced is properly tested and any necessary adjustments are made prior to release to ensure the quality of our paint at the absolute highest it can be.

WHAT KIND OF PAINT IS ALPHANAMEL?

Alphanamel is a highly pigmented oil based lettering and pinstriping enamel. We use professional quality ground pigments and carriers in our paints to ensure that our paints are incredibly durable, highly pigmented, and provide the best possible coverage in the market.

HOW DO I REDUCE ALPHANAMEL?

We recommend using our Alphasol Reducers (We have Hi-Temp and Low-Temp options!), VM&P Naptha, High Quality Turps, or Professional quality reducers to thin our enamels.

CAN I USE MINERAL SPIRITS WITH IT?

While mineral spirits is great as a cleaning solvent, We don't recommend mineral spirits as a reducer with any enamels, as over the years the chemical composition of mineral spirits has changed, and it can cause your finished product to look dull or flattened. It can also contribute to paint issues like chipping, drying too fast, over-thinning, and cause problems with adhesion to surfaces.

CAN I CLEAR OVER ALPHANAMEL?

Absolutely!

Like any other enamel based paint, it's best to use an oil based clear, but if you're painting on cars and motorcycles, or prefer a urethane based clear, we recommend that you add a few drops of our AlphaRock 2000 Hardener to your reducer while working with the paint, allowing it to cure for 48 hours, and then doing 2-3 light "dust coats" of your urethane clear before laying it on heavy. This will greatly reduce the risk of lifting (or wrinkles) in your artwork due to using urethane over enamel.

WHAT ABOUT LONGEVITY & DURABILITY?

Alphanamel has been environment-tested to have an 8-10 year longevity when used properly (proper prepping procedures and correct reducers) in outdoor applications, and is permanent in indoor applications.

TIPS FOR USE

GENERAL TIPS:

Shake bottles thoroughly before use. Each bottle has rattlers included to help mix the paint, similar to using spray paint cans.

METALLICS: High pigment loads of metallic paint causes separation and settling. This is completely normal, and is consistent with ALL oil based metallic paint. Make sure to mix with a popsicle stick before using. After time, metallics build up at the bottom of the bottle, and will not break up by shaking alone.

ELECTROSHOCK NEONS: Electroshock colors will dry matte. This is consistent with ALL oil based neon paints in the industry. Mixing a few drops of AlphaKlear per ounce prior to use will increase gloss level.
